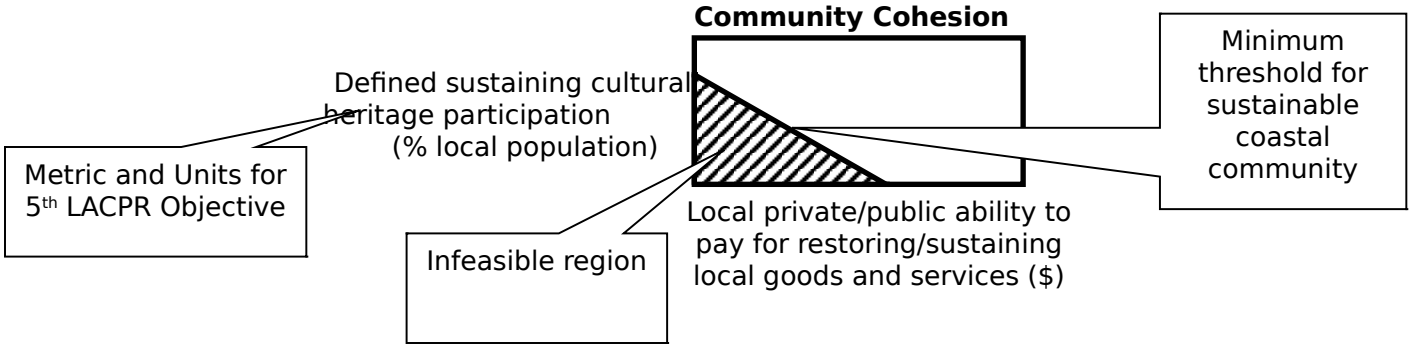
Draft Proposed Fifth LACPR Objective

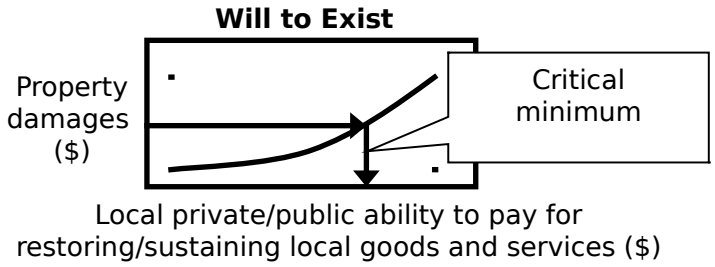
- Objective – Sustain local cultural heritage activities linked to maintaining skills of coastal workers
- Metric - Defined cultural heritage activity type(s)
- Units - % local populations participating in activity(ies)
- Concept for application
  - Ask locals participating in cultural heritage activities what measures would best help them attain sustainability
  - Build sustaining measures into alternatives and define performance, cost, benefits, and impacts
  - Evaluate performance of objective in RIP framework using community cohesion model structured for measuring cultural heritage participation

Draft Proposed Community Cohesion Model Concepts for Evaluation of Without Action Conditions and With Risk Reduction Measures Conditions

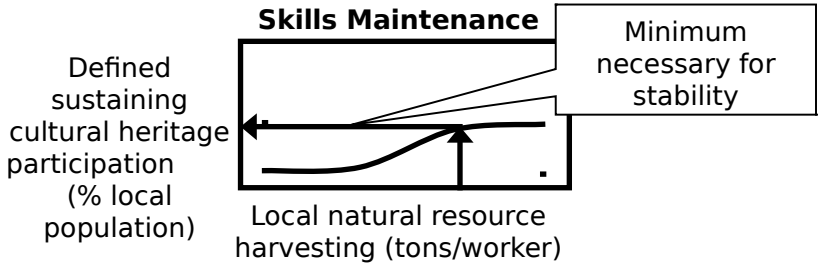
Hypothesis: For coastal community sustainability, there is a minimum threshold of cultural heritage participation required to support income generation based on natural resources harvesting, in a setting where storm water inundation is a threat, as manifested through community will to exist through recovery from successive property damage events.



Community Cohesion
Defined sustaining cultural heritage participation (% local population)
Metric and Units for 5th LACPR Objective
Minimum threshold for sustainable coastal community
Infeasible region
Local private/public ability to pay for restoring/sustaining local goods and services ($)



Will to Exist
Property damages ($)
Critical minimum
Local private/public ability to pay for restoring/sustaining local goods and services ($)



Skills Maintenance
Minimum necessary for stability
Defined sustaining cultural heritage participation (% local population)
Local natural resource harvesting (tons/worker)
